Betreff: Announcing the NEW Viessmann Developer Portal

Dear Viessmann Developer,

Today we relaunch our Developer Portal with a variety of improvements and new features, including:

- A fully redesigned [website](#) that makes it easier to navigate and find what you need, as well as an “inspiration” area where you can find new ideas for your project
- Improved documentation with more detailed explanations of functionalities that enables developers to more quickly get up and running with our API
- A new FAQ area to cover some of the most important questions our developers have around the portal, as well new contact options to get in touch for further assistance
- A new Advanced [package](#) that expands on the available feature set and number of API calls. It is intended for developers who need more than our Basic offering and can be booked directly via the Developer Portal

The portal allows end users and businesses to access a wide range of Viessmann heating system data via our API in order to develop their own smart home solutions. Smart home and connected device enthusiasts who own a Viessmann heating system can have better control over their own data.

Additionally, Viessmann is joining the efforts to tackle the current energy crisis by launching an [initiative](#) among our developers. The aim is to encourage developers like yourself to find a solution, using our Viessmann API, that decreases gas consumption. A winner will be chosen among the entries and the solution shared in the developer portal to encourage others to find ways to reduce energy use.

If you have not yet been to our Developer Portal or would like to see the new design, documentation and additional features, please visit our [website](#) today. If you have any queries or a project we can help with, please feel free to contact us developer@viessmann.com
